

Exchange Perpetuals: Margin & Leverage Framework

4-tier coin classification | Rescaled position caps | Formulaic MMR | Exact maintenance deduction

Core formulas: $IMR = 1 / \text{Max_Leverage}$ | $MMR = 1 / (2 \times \text{Max_Leverage})$ | $\text{Initial Margin} = \text{Position_Value} / \text{Max_Leverage}$ | $\text{Maintenance Margin} = \text{Position_Value} \times MMR - MD$ | $MD(\text{bracket } n) = MD(n-1) + \text{Upper_Bound}(n-1) \times [MMR(n) - MMR(n-1)]$

Coin categories are sourced from query_result_2026-05-14T04_54_06.796912591Z.xlsx and listed under each tier.
